Seminar in Marine Biology

BSC 4937; 2 Credits
Lecture 9-11am on Thursday

Spring 2014

This is a discussion-based course in which students will read recent primary literature on various topics in marine biology. Topics may include:

- Hydrothermal vents
- Coral reef ecology
- Harmful algal blooms
- Fisheries and sustainability
- Marine invasive species
- Marine Protected Areas
- Climate change
- Impact of Deepwater Horizon spill
- Challenges in marine conservation
